(Name and telephone number, including area code, of the person to contact in connection with this report.)

Check the appropriate box to indicate the rule pursuant to which this Form is being submitted, and provide the period to which the information in this Form applies:

☒ Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2024.

☐ Rule 13q-1 under the Securities Exchange Act (17 CFR 240.13q-1) for the fiscal year ended _____.

Section 1 - Conflict Minerals Disclosure

Item 1.01. Conflict Minerals Disclosure and Report.

In accordance with Rule 13p-1 under the Securities Exchange Act of 1934, as amended (the "Rule"), we conducted a reasonable country of origin inquiry ("RCOI") to assess whether conflict minerals necessary to the functionality or production of products we manufactured or contracted to manufacture in calendar year 2024 originated in the Democratic Republic of the Congo or an adjoining country (collectively, the "Covered Countries") or were from recycled or scrap sources. The Rule defines conflict minerals as cassiterite, columbite-tantalite, gold, wolframite, and their derivatives (tin, tantalum, and tungsten).

Based on the results of our RCOI, we have reason to believe that certain conflict minerals contained in our 2024 products may have originated in the Covered Countries and may not have been from recycled or scrap sources. We therefore conducted due diligence on the source and chain of custody of these minerals and prepared a Conflict Minerals Report, filed as Exhibit 1.01 hereto.

Conflict Minerals Disclosure

A copy of the Conflict Minerals Report for the calendar year ended December 31, 2024 is available on our website at https://www.micron.com/about/company/our-commitment/conflict-minerals-policy. The content of any website referred to in this Form SD is included for general information only and is not incorporated by reference in this Form SD.

Item 1.02. Exhibit.

The Conflict Minerals Report for the calendar year ended December 31, 2024 is filed as Exhibit 1.01 hereto.

Section 2 - Resource Extraction Issuer Disclosure

Item 2.01. Resource Extraction Issuer Disclosure and Report

Not applicable.

Section 3 - Exhibits

Item 3.01. Exhibits.

The following exhibit is filed as part of this Form SD.

Exhibit 1.01 - Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form SD.

SIGNATURE

Pursuant to the requirements of the Securities Exchange Act of 1934, the Registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

MICRON TECHNOLOGY, INC.

Date: May 20, 2025

By: */s/ Mark Murphy*
Name: Mark Murphy
Title: Executive Vice President and Chief Financial Officer

Exhibit 1.01

Micron Technology, Inc.

Conflict Minerals Report
Calendar Year 2024

We[1] prepared this Conflict Minerals Report (**"CMR"**) pursuant to Rule 13p-1 under the Securities Exchange Act of 1934, as amended (the **"Rule"**). This CMR covers the calendar year reporting period ended December 31, 2024[2] and is filed as an exhibit to our Form SD. This CMR includes a description of the measures we have taken to exercise due diligence on the source and chain of custody of conflict minerals[3] (specifically gold, cassiterite, columbite-tantalite and wolframite and their derivatives tin, tantalum, and tungsten (collectively **"3TG"** or **"conflict minerals"**)) necessary to the functionality or production of our memory and storage products manufactured during the year ended December 31, 2024.

Overview of Our Commitment to Responsible Sourcing:

In support of global responsible sourcing, we are committed to monitoring our supply chain with a goal to ensure that conflict minerals directly or indirectly supporting civil violence or human rights abuses in the Democratic Republic of the Congo (**"DRC"**) or adjoining countries (collectively, the "**Covered Countries**") are not used in the manufacture of Micron products. We also believe that responsible sourcing means continuing to support stable economic development in the Covered Countries (rather than a Covered Country embargo), and accordingly we do not prohibit our suppliers from using 3TG metals sourced from the Covered Countries, provided that the metal sources are compliant with our program requirements. Our conflict mineral supply chain monitoring program is consistent with the Organisation for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (Third Edition) (the "**OECD Guidance**") and integrates tools developed by the Responsible Minerals Initiative (**"RMI"**).

Micron is a founding member of RMI (member ID MICR). We continue to support RMI and its Responsible Minerals[4] third-party auditing program, the Responsible Minerals Assurance Process (**"RMAP"**), as part of our commitment to drive ethical sourcing of 3TG metals throughout our supply chain. In 2024, we continued working with RMI and provided leadership through multiple RMI leadership working groups, including the Smelter Engagement, Multi-Stakeholder, Gold, Cobalt Task Force, Due Diligence Practices, Mineral Reporting Templates, Emerging Minerals, and RMI Plenary Working Groups. The RMI Plenary Working Group is tasked with defining future directions, protocol, procedures, issue resolutions, recognition of other reporting organizations, training, oversight, and smelter and refiner engagements. To learn more about RMI's initiatives to help companies achieve a responsible minerals supply chain and the RMAP visit responsiblemineralsinitiative.org.

Micron's Conflict Minerals Policy is published at https://www.micron.com/about/company/our-commitment/conflict-minerals-policy about our responsible minerals supplier requirements, see our Micron Supplier Requirements Standard (**"SRS"**) at https://www.micron.com/about/company/suppliers. The content of any website referred to in this Report is included for general information only and is not incorporated by reference in this Report.

---

1 In this CMR, unless otherwise indicated or the context otherwise requires, "we," "us," "our," "Micron," and the "Company" refers to Micron Technology, Inc. and its subsidiaries.

2 Unless otherwise noted, any designation of years refers to calendar years.

3 Conflict minerals are those minerals regulated by Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

4 The term "responsible minerals" as used herein refers to a process to verify that relevant smelters or refiners are Conformant with the RMI's RMAP or an equivalent third-party auditing program.

Overview of Micron's Responsible Minerals Program:

We require our suppliers[5] to source 3TG metals from smelters and refiners validated as Conformant[6] with responsible minerals sourcing standards (such as the RMAP or standards enacted by the London Bullion Market Association (**"LBMA"**) or the Responsible Jewellery Council (**"RJC"**)). To ensure our suppliers meet our SRS requirements for responsible minerals sourcing, we make all suppliers aware of our commitment to responsible sourcing and our expectation that all smelters and refiners in our supply chain are Conformant with responsible minerals sourcing standards; conduct ongoing due diligence on the source and chain of custody of conflict minerals in our supply chain consistent with the OECD Guidance; encourage suppliers to adopt responsible sourcing practices; and collaborate with industry stakeholders through our leadership in the RMI. To further transparency in the conflict mineral supply chain, in addition to publicly reporting the results of our due diligence efforts annually, we share our due diligence results directly with our customers.

In 2024, we requested that all new suppliers take a Supplier Compliance Training, which helped increase awareness of and focus on our requirement that Micron suppliers may only use Conformant smelters and refiners. All of our applicable suppliers for 2024 provided CMRT responses and the associated supply chain data. As a result of our supplier engagement efforts during 2024, and for the eighth consecutive year, based on the information provided by our suppliers, no supplier within our memory and storage products supply chain reported any smelters or refiners that had a Non-Conformant status with RMI as of December 31, 2024. Only two of our smelters and refiners were listed as Active[7] by RMI as of December 31, 2024. We continue to monitor Active smelters and refiners in our supply chain while they progress through the RMI assessment or re-assessment process. We also continued to implement our resolution process to quickly identify and work toward removal of smelters and refiners from our supply chain either (a) when they drop out of the RMI, LBMA, or RJC programs and thus become Non-Conformant or (b) when their Conformant status with RMI is no longer valid.

Based on the information provided by our suppliers and our due diligence efforts through December 31, 2024, we identified a total of 201 smelters and refiners we believe were in our memory and storage products supply chain at any point during the year ended December 31, 2024, none of which had a Non-Conformant status with RMI at the time they entered our supply chain. 30 smelters and refiners that were reported to be in our memory and storage products supply chain during 2024 were subsequently determined, on or prior to December 31, 2024, to be inoperative or removed. We determined that 171 smelters and refiners were in our memory and storage products supply chain as of December 31, 2024, of which 169 were validated as Conformant and two were listed as Active with RMI.

1. Our Outreach to Suppliers and Reasonable Country of Origin Inquiry

Our goal is to ensure that all 3TG metals in our supply chain are sourced through responsible minerals smelters and refiners. In furtherance of that goal, we collect information at least annually utilizing the RMI Conflict Minerals Reporting Template ("**CMRT**") from applicable suppliers regarding their supply chains, including the names and locations of smelters and refiners of 3TG and whether any 3TG are sourced from Covered Countries or from conflict-affected and high-risk areas. We then ask that suppliers review and acknowledge our Conflict Minerals Policy and our SRS, which outlines our expectations that all smelters and refiners in our supply chain are, and remain, validated as Conformant.

In addition, we required that new suppliers in our memory and storage products supply chain participate in our Supplier Lifecycle Performance Management process as they were added to our memory and

---

[5] The term "supplier(s)" refers to both incumbent and new suppliers and manufacturers that are likely to provide us with products containing 3TG metals that are necessary to the function or manufacture of our memory and storage products. The term "supplier(s)" does not include suppliers and manufacturers to the extent that they supply us with equipment or tools used in manufacturing our products.

[6] The term "Conformant" means that a smelter or refiner is verified as Conformant with the RMI's RMAP or an equivalent third-party auditing program.

[7] The term "Active," with respect to the RMI, means that a smelter or refiner has committed to undergo an RMAP assessment, completed the relevant documents, and scheduled an on-site assessment.

storage products supply chain throughout the year, and we requested that they complete our formal Supplier Compliance Training program.

We make our suppliers aware that smelters and refiners that fail to become Conformant in one or more responsible sourcing auditing programs will be targeted for removal from our memory and storage products supply chain. In addition, the terms and conditions we include with every Micron purchase order further reinforce our responsible sourcing expectations and requirements with direct reference to our SRS. Throughout 2024, we worked with our suppliers to help raise awareness of our expectations, provide ongoing education concerning our requirements, and provide training through our risk mitigation and escalation process.

Our outreach to suppliers, which included our reasonable country of origin inquiry, provided us with aggregated mine level information on the origin of 3TG from smelters and refiners reported to be in our memory and storage products supply chain in 2024. Although we were unable to determine mine-specific country of origin information, we had reason to believe that at least some sourcing was from the DRC and adjoining countries. Accordingly, we conducted due diligence on the chain and custody of 3TG and prepared this Conflict Minerals Report.

2. Our Conflict Minerals Due Diligence Program

2.1 Our Conflict Minerals Due Diligence Program Design

We have designed our conflict minerals due diligence program in conformance, in all material respects, with the principles of the OECD Guidance and the supplements thereto as applied to downstream companies. As a downstream purchaser of 3TG metals, our due diligence program can provide only reasonable, not absolute, assurance regarding the source and chain of custody of the 3TG metals necessary to the functionality or production of our products. Our due diligence processes are based on the necessity of seeking data from our direct suppliers and those suppliers seeking similar information within their supply chains to identify the original sources of the 3TG metals contained in our memory and storage products. We also rely, to a large extent, on information collected and provided by RMI and other third-party auditing programs. Such sources of information may yield inaccurate, incomplete, or over-inclusive information and may be subject to fraud.

2.2 Our Conflict Minerals Due Diligence for 2024 Products

2.2.1 Our Management Systems

For the year ended December 31, 2024, management of our responsible minerals program was provided by a cross-functional Responsible Minerals Steering Team ("**Steering Team**"), with representatives from Micron's Procurement, Supply Chain, Finance, Sales, Sustainability, and Legal departments, headed by a senior procurement compliance manager. The Steering Team met at least monthly during the year ended December 31, 2024, to review progress towards maintaining our goal of a responsibly-sourced supply chain. Oversight of the Steering Team was provided by a cross-functional Responsible Minerals Executive Team ("**Executive Team**") comprised of Vice President-level executives, and the Executive Team is charged with sponsoring and reviewing our responsible minerals program. In addition, our Global Supply Chain Compliance Council, which includes a subset of the Executive Team, is charged with direct oversight of our responsible sourcing program. During the year ended December 31, 2024, the Steering Team reported regularly to the Global Supply Chain Compliance Council to review our progress towards our goal of achieving a responsibly-sourced supply chain.

Micron's Conflict Minerals Policy is published at https://micron.com/about/company/our-commitment/conflict-minerals-policy.

We also continued to incorporate our responsible minerals supplier requirements (i.e., that suppliers must report 100% of their supply chain and only source from Conformant smelters and refiners) into the terms and conditions of our purchase orders and supplier agreements, and maintained internal and third-party access to our ethics and compliance helpline, which can be used to report issues relating to conflict minerals. Our program includes a sixteen-year record retention policy for our responsible minerals documents.

2.2.2 Our Risk Assessment

We conducted due diligence, as described in this CMR, to try to determine the source and chain of custody of the necessary 3TG metals contained in these memory and storage products. Our management assessment process led us to believe that at least some sourcing is from the DRC and adjoining countries. We were unable to determine the specific country of origin of some of the necessary 3TG metals contained in memory and storage products we manufactured and sold during the year ended December 31, 2024 and/or whether some of the memory and storage products we manufactured and sold during the year ended December 31, 2024 contained 3TG metals that may have directly or indirectly financed or benefited armed groups in the DRC or an adjoining country.

As part of our due diligence process, we collected, screened, and analyzed CMRTs from all applicable suppliers for the year ended December 31, 2024. We provided our suppliers with formal notification of Micron's requirements to convey our expectations that they report to us any changes to their supply chains that would affect their CMRT status.

We reviewed all CMRT responses and updates received for the year ended December 31, 2024, and determined whether the disclosed smelters or refiners were recognized by RMI or equivalents as processors of 3TG metals, and if so, whether they had been validated as Conformant by these organizations. We reviewed supplier CMRTs for accuracy and overall adherence to our responsible minerals requirements, as delivered through our inquiry letter to suppliers, and we began our risk mitigation (and escalation processes, if necessary) set out in our responsible minerals procedures with suppliers having disclosed any smelters or refiners that were not Conformant.

Other elements of our risk assessment process are described in "Overview of Micron's Responsible Minerals Program."

2.2.3 Our Risk Management

If a supplier delivers a CMRT that includes smelters or refiners not listed as Conformant, we implement our risk mitigation procedures, beginning with direct outreach to the supplier and escalating discussions up through the management structure of our respective companies. We work with these suppliers throughout the risk mitigation process to provide awareness of Micron's goal to only source from Conformant smelters or refiners. 30 smelters and refiners that were reported to be in our memory and storage products supply chain during 2024 were subsequently determined, on or prior to December 31, 2024, to be inoperative or removed. As of December 31, 2024, two smelters and refiners in our memory and storage products supply chain were listed as Active with RMI.

We are members of multiple RMI working groups, including the RMI Smelter Engagement Working Group, which was tasked with identifying and influencing smelters and refiners in the supply chains of RMI members to join the RMAP and become validated as responsibly sourced. Micron also has additional RMI formal representation and leadership positions on multiple RMI working groups, including the Multi-Stakeholder, Due Diligence Practices, Mineral Reporting Templates, Gold, Cobalt Task Force, Emerging Minerals, and RMI Plenary Working Groups. Through our membership dues and audit fund contributions, we provide funding to DRC in-region agencies.

2.2.4 Smelter and Refiner Auditing

As we do not source necessary 3TG metals directly from smelters or refiners, we rely on independent third-party auditing programs, such as the RMAP, LBMA, and RJC to coordinate audits of smelters and refiners in our memory and storage products supply chain.

2.2.5 Reporting

We report our annual conflict minerals due diligence results in our responsible minerals program to the U.S. Securities and Exchange Commission through the Form SD and the CMR. We make the CMR available on our company website.

3. Our Product Descriptions

Our product portfolio of memory and storage solutions, advanced solutions, and storage platforms is based on our high-performance semiconductor memory and storage technologies, including dynamic random access memory ("**DRAM**"), NAND, and NOR (both as described below). We sell our products through our business units into various markets in numerous forms, including: components, modules, solid state drives ("**SSDs**"), managed NAND, multi-chip packages, and wafers. Many of our system-level solutions combine NAND, a controller, firmware, and in some cases DRAM. During the year ended December 31, 2024, we manufactured or contracted to manufacture the following types of memory and storage products containing 3TG metals.

DRAM

DRAM products are dynamic random access memory semiconductor devices with low latency that provide high-speed data retrieval with a variety of performance characteristics. DRAM products lose content when power is turned off ("**volatile**") and are most commonly used in the data center, client PC, graphics, industrial, and automotive markets.

NAND

NAND products are non-volatile, re-writeable semiconductor storage devices that provide high-capacity, low-cost storage with a variety of performance characteristics. NAND is used in SSDs for the data center, client PC, consumer, and automotive markets and in removable storage markets. Managed NAND is used in smartphones and other mobile devices, and in consumer, automotive, and embedded markets. Low-density NAND is ideal for applications like automotive, surveillance, machine-to-machine, automation, printer, and home networking.

NOR

NOR products are non-volatile, re-writable semiconductor memory devices that provide fast read speeds. NOR is most commonly used for reliable code storage (e.g., boot, application, operating system, and execute-in-place code in an embedded system) and for frequently changing small data storage and is ideal for automotive, industrial, and consumer applications.

Results of Due Diligence Review

Reported Smelters and Refiners Used to Process 3TG Metals

Throughout 2024, we worked with our suppliers in an effort to source only from smelters and refiners that were validated as Conformant with a responsibly-sourced auditing program. We identified 201 smelters and refiners that are recognized by RMI, LBMA, or RJC to be processors of 3TG metals and that we believe were potentially in our memory and storage products supply chain for the year ended December 31, 2024, none of which had a Non-Conformant status with RMI at the time they entered our supply chain. 30 smelters and refiners that were reported to be in our memory and storage products supply chain during 2024 were subsequently determined, on or prior to December 31, 2024, to be

inoperative or removed. Therefore, based on such information, we believe that 171 smelters and refiners were in our memory and storage products supply chain as of December 31, 2024, of which 169 were validated as Conformant and two were listed as Active with RMI.

Many of our suppliers reported smelter and refiner information at the company level rather than limiting their responses to smelters and refiners associated with products sold to Micron. As a result, some reported smelters and refiners may not be associated with our memory and storage products. Appendix A sets forth a list of the names and locations of all of the potential smelters and refiners in our memory and storage products supply chain as reported by our suppliers for the year ended December 31, 2024.

Aggregated Countries of Origin of 3TG Metals

Our due diligence efforts did not result in sufficient information to conclusively determine the countries of origin of all necessary 3TG metals in our products. Appendix B sets forth a list of potential countries of origin of 3TG metals that may be in our products based on information provided to us by our suppliers and RMI, all of which information is available to us (and is therefore being disclosed) on an aggregated basis only for RMAP Conformant smelters.

Mine or Location of Origin

RMI has an established audit protocol to assess whether smelters and refiners of 3TG metals employed policies, practices, and procedures to source responsibly-sourced minerals. RMI, through the RMAP, collects and provides access for its members to certain information regarding the origin of minerals processed at RMAP responsibly-sourced smelters and refiners.

We required the suppliers in our memory and storage products supply chain to complete the RMI CMRT. We reviewed the supplier responses as well as information available through the RMI on the mine or location of origin of 3TG metals processed by these smelters and refiners collectively. Our suppliers' responses and the RMI's information did not provide sufficiently detailed information for us to determine the mine or location of origin of the necessary 3TG in our products for the calendar year 2024.

4. 2025 Due Diligence Improvement Measures

During the 2025 reporting year, Micron intends to:

- Continue to engage with and provide active participation and leadership in the various RMI working groups;
- Continue to proactively engage with all suppliers in an effort to accomplish our goal that all smelters and refiners in our supply chain are Conformant;
- Continue to refine and improve our responsible minerals program to ensure quick remediation of any smelter or refiner that loses Conformant status; and
- Expand our responsible minerals program to ensure responsible sourcing of additional minerals beyond 3TG and include more geographies as practicable in line with industry standards and RMI capabilities and programs.

*****

This Conflict Minerals Report contains forward looking statements related to our conflict minerals due diligence programs for 2025. We wish to caution you that such statements are predictions and that actual events or results may differ materially. Although we believe that the expectations reflected in the forward-looking statements are reasonable, we cannot guarantee future results, levels of activity, performance, or achievements. We are under no duty to update any of the forward-looking statements to conform these statements to actual results.

Appendix A
Reported 3TG Smelters and Refiners List

This table provides the names and locations of all of the potential 3TG smelters and refiners in our memory and storage products supply chain that were reported by our suppliers for the year ended December 31, 2024. This table reflects the (i) smelter or refiner's Conformant or Active status as reflected in the RMI Smelter Database as of December 31, 2024 and (ii) names and locations of such smelters and refiners as listed in the RMI Smelter Database as of January 8, 2025. We cannot confirm which of the smelters and refiners in this table processed the necessary 3TG metals contained in our products, as many of our suppliers identified all smelters and refiners in their total supply chain rather than just those smelters and refiners associated with products sold to us.

* The smelter/refiner was reported to be in our memory and storage products supply chain during 2024 and was subsequently determined, on or prior to December 31, 2024, to be inoperative or removed. Up-to-date information on the validation status of smelters and refiners participating in the RMAP is available at responsiblemineralsinitiative.org/smelters-refiners-lists.

** The smelter or refiner was listed as Active with RMI as of December 31, 2024.

Appendix B
Aggregated Countries of Origin List

This table sets forth an aggregated list of countries (or regions) of origin for 3TG metals that may be in our products based on information available from RMI on countries of origin for smelters or refiners that have been validated as Conformant with the RMAP. Due to confidential business information concerns, RMI provides this country of origin information on an aggregated basis. This table reflects information available from RMI as of December 31, 2024.

Albania	Ecuador	Liechtenstein	Saudi Arabia
Algeria	Egypt	Lithuania	Senegal
